SHAOXIANG WU

wushaoxiang31@gmail.com

PROFILE

Fifth-semester Information Systems undergraduate at the Technical University of Munich (TUM). Interested in efficient AI: making each unit of useful intelligence less costly in data, computation, and model capacity.

EDUCATION

Technical University of Munich (TUM) Current

B.Sc. in Information Systems | Fifth semester

RESEARCH EXPERIENCE

Research Assistant | Chair of Data Analytics and Statistics, TUM April 2026 - Present

Research under Dr. Lukas Edman on efficient language-model learning.

RESEARCH PROJECTS

BabyLM: Paired Rewrites for Small-Data Pretraining

Paired original sentences with meaning-preserving rewrites to improve learning from a limited text budget. Compared simplification, explanation, and paraphrasing across multiple text sources and language benchmarks.

Induction-Circuit Initialization

Developed a weight-initialization rule for induction circuits in freshly initialized models by studying the weight-matrix structure of the corresponding circuits.

PUBLICATION

Shaoxiang Wu, Alexander Fraser, and Lukas Edman. "Pairing Original Text with Meaning-Preserving Rewrites for Sample-Efficient Small-Data Language Model Pretraining." *BabyLM Workshop at EMNLP 2026*. Accepted August 27, 2026.

RECOGNITION

2nd place, BabyLM 2026 Strict-Small track (10-million-word training-data limit).
